FAULT DIAGNOSING SYSTEM FOR HOME BETTING TERMINAL
FUJITSU LTD

Inventor(s): ; MIZUTA HIDEYUKI ; KUDO TAKASHI
Application No. 63097842, Filed 19880420, Published 19891026

Abstract: PURPOSE: To prevent a trouble due to the fault of a home betting terminal on the very day of a race by providing a home betting terminal, preparing pseudo betting data to execute pseudo betting, and transmitting them to a computer set in a president side center.

CONSTITUTION: A data file 5 is provided at a home betting terminal 4, and a power source is inputted on the previous day of the race. A computer 2 in the president side center automatically connects a telephone line 3, transmits fund data to execute the pseudo betting and race information to the home betting terminal 4, the home betting terminal 4 stores received contents into the data file 5, based on this, the pseudo betting data are prepared, and transmitted to the president side center. When the computer 2 receives the pseudo betting data, it disconnects the telephone line 3, decides whether or not the received pseudo betting data correspond to an expected value fixed beforehand, and when they do not correspond, the abnormality of the said terminal is notified to an operator. Thus, the trouble of the home betting terminal on the very day of the race can be prevented beforehand.
